Springer Jan 1994, 1994. Taschenbuch. Book Condition: Neu. 235x155x19 mm. This item is printed on demand - Print on Demand Titel. Neuware - This book offers a model for concepts and their dynamics. A basic assumption is that concepts are composed of specified components, which are represented by large binary patterns whose psychological meaning is governed by the interaction between conceptual modules and other functional modules. A recurrent connectionist model is developed in which some inputs are attracted faster than others by an attractor, where convergence times can be interpreted as decision latencies. The learning rule proposed is extracted from psychological experiments. The rule has the property that when a context becomes more familiar, the associations between the concepts of the context spontaneously evolve from loose associations to a more taxonomic organization. 360 pp. Englisch.
